(PRWeb) January 4, 2005 -- Multi-Media Productions (USA), Inc. announces the appearance of 4 Terrorism on World Business Review, hosted by General Alexander Haig. This segment is available for viewing via video streaming by clicking:

300k WMP <http://reflectweb.reflectsystems.com/FileFactory.aspx?Player=1&MediaID=20745>

300k Real <http://reflectweb.reflectsystems.com/FileFactory.aspx?Player=1&MediaID=20744>

The segment focuses on Cyber Terrorism. Even before the attacks of September 11th, terrorism posed a serious threat to computer users everywhere. These days, even with new security measures in place, the threat still exists.

"Information security issues are complex and are often rooted in organizational and business concerns. Information security requires far more than the latest tool or technology. Organizations must understand exactly what they are trying to protect (and why) before selecting specific solutions. The vast majority of successful cyber-attacks are made possible by vulnerabilities in a small number of common services. Attackers usually take the easiest and most convenient route and exploit the best-known flaws with the most effective and widely available attack tools," said [www.4Terrorism.com](http://www.4terrorism.com) Chief Technology Officer Jim Bullough-Latsch, <http://www.4terrorism.com/911/Haig-Security.htm>

World Business Review airs on CNBC Paid Programming, and the Bravo! Network. World Business Review may also be viewed on United Airlines in-flight TV, or through video on demand via wbrtv.com. The WBR Series is also available at more than 90 prestigious college universities, including Carnegie Mellon University, the University of Notre Dame, Dartmouth College and Georgetown University. For more information, please visit www.wbrtv.com

4Terrorism is focusing its efforts on Information Security and Cybersecurity (www.4terrorism.com/listtemp.htm). Today, it is imperative that companies develop and possess effective, individual controls over critical information. 4Terrorism is able to review your entire system and use our findings as a launching pad to help improve the effectiveness of your overall security. Computers and networks essentially run the operations of most business in the country. Most computer systems, computer software and networks were not designed with security in mind. Even most secure systems are riddled with vulnerabilities due to the underlying technology that could enable an attacker to disrupt operations or cause damage. 4terrorism can help your company or organization develop a cost effective, threat effective, cyber security plan. 4Terrorism starts first with an audit of your IT system and security and then develop an implementation plan that matches your business needs. Security Audits: www.4terrorism.com/securityaudits.htm
